- The leader in support solutions introduced JAC-BOT, the W Series Lifting System, a new piece of equipment for its global debut.

As part of its successful participation in the PERUMIN 37 Mining Convention, International Wheel, a company focused on providing systems, machinery, equipment, and services for the mining, oil, and construction industries, launched the JAC-BOT W Series Lifting System, designed for lifting large mining trucks.

“This rugged, semi-off-road vehicle was designed with safety in mind, utilizing a wireless remote control that keeps personnel away during lifting and allows the device to be moved with little to no effort,” said Paul Geldres, general manager of International Wheel.

Sealed lead-acid batteries are safe and practical, with years of proven experience. The status of the entire JAC-BOT fleet is efficiently managed through the SMART module, which can be monitored via IoT.

He reaffirmed that the equipment is electric, remote-controlled, and controlled by a computer. "This is a new piece of equipment; it's the first one to be introduced globally," he said.

As is traditional, International Wheel held another exhibition with an impressive stand in the outdoor area. "We have always been present at PERUMIN, without interruption. At every opportunity, we seek to bring innovations and technology to make operations more efficient, with the goal of creating safer mining," Geldres stated.

Since its founding in 1986, International Wheel's goal has been to contribute advanced technology that enables its customers to improve safety, increase productivity, and reduce costs.

The products they offer are recognized worldwide for their excellent quality. Their experience and service have proven to provide cost-effective solutions with lasting value.

"We are integrators because we work with suppliers from various countries (Germany, Canada, the US, Australia). We integrate teams to ensure our customers have better performance and availability," he noted. He added that their products and brands are interconnected, forming an ecosystem.

International Wheel began serving tire shops in the country's mines. It also initially offered products and solutions for chains, radiators, and truck maintenance equipment.

Today, it operates in the country's major mines and is the exclusive representative of prestigious brands such as MESABI; RUD Erlau; B&D Manufacturing; Clickmox; Haltec Corporation; Reliable Wheel Products Ltd; TDS Wheel; IMT; Ground Force Worldwide; Pettibone; Parker; L&H Industrial; and IWI-Integrated Wireless Innovations.
